EIN KLEINES WIRTSCHAFTSWUNDER... A LITTLE ECONOMIC MIRACLE...

In vielen Jahren der Forschung ist es GUHDO gelungen, eine neue Produktlinie zu entwickeln: G-Max. Die Zielsetzung war eine Lösung für abrasive Materialien zu finden, welche die Werkzeuge stark verschleifen.

Spezielle Hartmetalle wurden zu diesem Zweck zusammen mit geometrischen Änderungen in den Werkzeugen entwickelt. Diese werden in modernen CNC Maschinen produziert und mit einer überlegenen Qualität in Automaten geschliffen. Dies macht die G-Max Fräser zu den besten dieser Produktlinie.

Many years of research have led GUHDO to come out with a new line of straight router bits – the G-Max. The objective was to give a solution for abrasive materials that dull the tools.

Special carbide was developed for this purpose along with geometric changes in the tools. These were produced in modern CNC machines and in a grinding of superior quality in automatic machines that transform the G-Max into the very best straight tool.

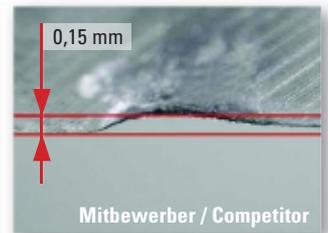

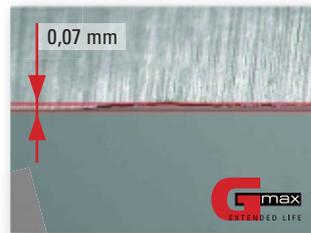

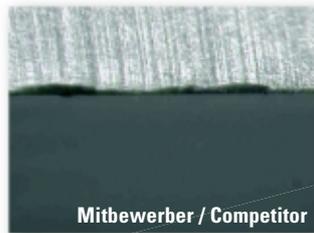

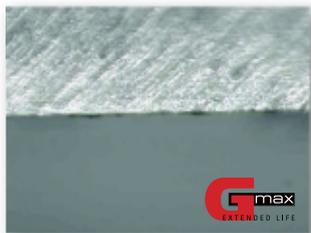

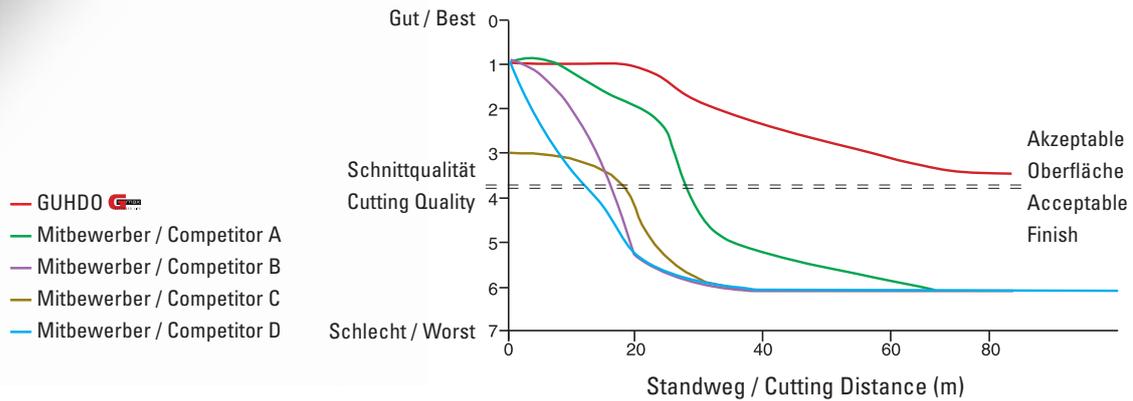

Gmax
EXTENDED LIFE

MITBEWERBER
COMPETITOR

We tested and compared the new G-Max router bits against four other manufacturers. The result are shown in the graph.

Wir haben die neuen G-Max Werkzeuge gegenüber vier anderen Herstellern geprüft und verglichen. Das Resultat wird im Diagramm gezeigt.

Die neuen G-Max Fräser sind mit einem der führenden Konkurrenten an einer 90-fachen Vergrößerung verglichen worden – der Unterschied der hergestellten Qualität ist deutlich zu sehen.

The new G-Max router bit is compared to a leading competitor at a magnification of x 90 – it is possible to see the difference in the manufactured quality.

Unter Laborbedingungen wurden die zwei Fräser beim Schneiden einer abrasiven beidseitig Melamin beschichteten Platte, mit einer Stärke von 17 mm geprüft. Nachdem beide Werkzeuge eine Distanz von 70 Metern geschnitten hatten, wurde die Abnutzung der Fräser bei 20-facher Vergrößerung verglichen. Der neue G-Max Fräser hatte nur 0,07 mm Abnutzung gegenüber des Fräasers dieses Mitbewerbers, welcher eine Abnutzung von 0,15 mm hatte.

Under laboratory conditions the two router bits were tested cutting an abrasive double sided melamine in a thickness of 17 mm. After both tools had cut a distance of 70 meters, the wear of the router bits were compared against each other at a magnification of x 20. The new G-Max router had only worn by 0.07mm, whereas the nearest competitor's router bit had worn by 0.15mm.

Beide Tests liefern den eindeutigen Beweis der weit überlegenen Schnitfähigkeit unserer neuen G-Max Produktlinie.

Both tests provide clear evidence of the superior cutting ability of our new G-Max router bits.

EXTENDED LIFE

Technische Informationen

Schnittgeschwindigkeit

Bei kleinen Werkzeugdurchmessern, wie in der CNC Oberfrästechnik üblich, ergeben sich nicht immer optimale Einsatzbedingungen. Die Schnittgeschwindigkeit (Vc) in der Holzbearbeitung liegt zwischen 40 – 70m/sec.

$$D = 20 \text{ mm}, n = 24000 \text{ min}^{-1}$$

$$V_c = \frac{D \times \pi \times n}{60}$$

$$V_c = \frac{0,02\text{m} \times 3,14 \times 24000 \text{ min}^{-1}}{60}$$

$$V_c = 25,12 \text{ m/sec}$$

Die optimale Schnittgeschwindigkeit wird also nur in den seltensten Fällen erreicht.

Technical Informations

Cutting speed

At small diameter, like usual in the CNC router technic, optimal operating conditions are not always resulting. The cutting speed in the woodworking ist between 40 – 70m/sec.

$$D = 20 \text{ mm}, n = 24000 \text{ min}^{-1}$$

$$V_c = \frac{D \times \pi \times n}{60}$$

$$V_c = \frac{0,02\text{m} \times 3,14 \times 24000 \text{ min}^{-1}}{60}$$

$$V_c = 25,12 \text{ m/sec}$$

The optimal cutting speed is reached in the rarest cases.

Einsatzdaten

Vorschubgeschwindigkeit in Abhängigkeit von Drehzahl und Schneidenanzahl

Service Datas

Feed motion in dependence of speed and number of cutting edges

| | | Drehzahl / RPM n [min ⁻¹]: | | |
|--|----------------------------------|--|---------|---------|
| | | 18000 | 24000 | 27000 |
| Vorschubgeschwindigkeit Vf [m/min] Feed rate Vf [m/min] | Z = 1 Werkzeug: Z = 1 Tool: | 4 – 6 | 5 – 8 | 6 – 9 |
| Vorschubgeschwindigkeit Vf [m/min] Feed rate Vf [m/min] | Z = 2 Werkzeuge: Z = 2 Tools: | 8 – 12 | 10 – 16 | 12 – 18 |
| Vorschubgeschwindigkeit Vf [m/min] Feed rate Vf [m/min] | Z = 3 Werkzeuge: Z = 3 Tools: | 12 – 18 | 15 – 24 | 18 – 27 |

Dies sind Richtwerte, als grober Anhaltspunkt für die Maschineneinstellung. Materialabhängig müssen diese Parameter korrigiert werden.

These are standart values as an inexact indication for the machine set up. Depending on the material these parameters have to be corrected.

Technische Informationen

Gleichlauf / Gegenlauf

Bei den Zerspanungsarten unterscheidet man den Gleichlauf (GLL) und Gegenlauf (GGL). Man spricht von Gegenlauf, wenn die Vorschubrichtung gegen die Drehrichtung des Werkzeuges läuft. Gleichlauf ist dann gegeben, wenn die Vorschubrichtung und die Drehrichtung des Werkzeuges in einer Richtung verlaufen.

Vergleich Gegenlaufspanen (GGL) – Gleichlaufspanen (GLL)

Die Vorteile des Gegenlaufspanens haben zur überwiegenden Anwendung dieser Zerspanungsart vor allem in der Vollholzbearbeitung geführt:

- längerer Standweg,
- geringerer Leistungsbedarf wegen Vorspaltung.

Dem stehen die Nachteile des Gegenlaufspanens gegenüber:

- Gefahr größerer Faserausrisse
- Beschichtungsausbrüche
- größere Vorschubkräfte notwendig

Die Vorteile des Gleichlaufspanens sind:

- keine Vorspaltung bei Vollholz,
- damit saubere, ausrißarme Schnittflächen
- saubere Schnittkanten und geringere Ausbrüche bei beschichteten Platten,
- geringere Vorschubkräfte.

Dem stehen die Nachteile des Gleichlaufspanens gegenüber:

- geringerer Standweg, d.h. die Werkzeuge stumpfen eher ab
- größere Schnittkräfte, da keine Vorspaltung stattfindet

Technical Informations

Same direction / counter direction

A distinction is drawn between same direction and counter direction. Counter direction is meant if the feed direction runs against the direction of rotation of the tool. Same direction is given, if the feed direction and the direction of rotation of the tool, runs in one direction.

Comparison counter direction chipping (GGL) – same direction chipping (GLL)

The advantages of same direction chipping have led to a predominant use of this chipping type, particularly in the massiv wood conditioning:

- longer tool life
- minor energy demand because of predivision

The disadvantages of counter direction chipping are:

- danger of larger crumbling
- coating problems / coating split
- higher feed rate forces required

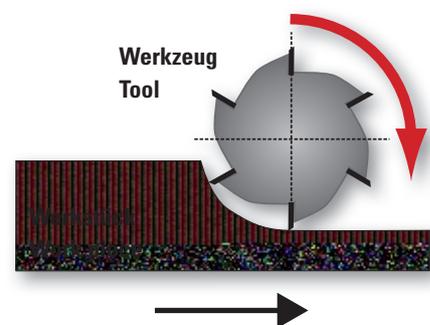

The advantages of same direction chipping are:

- no predivision at massiv wood
- clean cutting surface
- clean cutting edges und minor outburst at coated plates
- less feed rate forces required

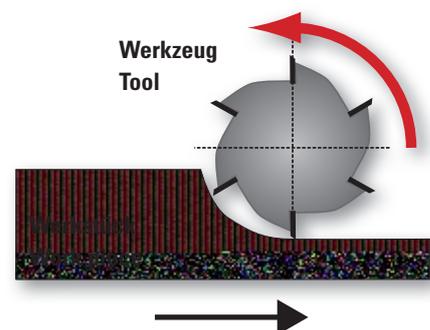

The disadvantages of same direction chipping are:

- less tool life viz tools are blunting more
- bigger cutting force, because of no predivision

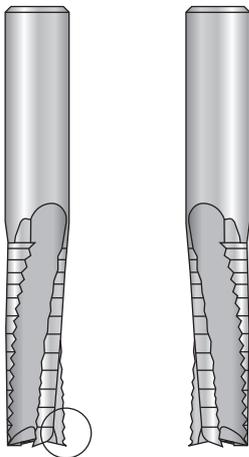

Gegenlaufräsen

Gleichlaufräsen

6230 HWM

HWM-Schruppfräser Z3

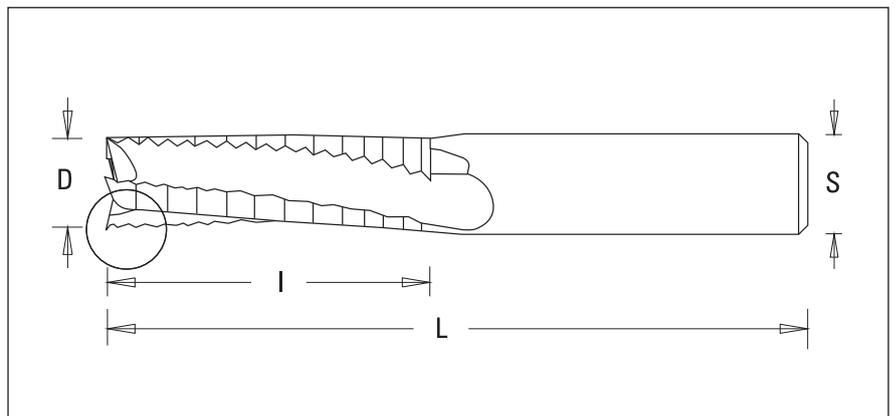

- Zum Vorfräsen und Auftrennen von Holzplattenwerkstoffen und Massivhölzern
- Geeignet für hohe Spanleistung und Vorschubgeschwindigkeiten
- Spiralgenutet, durchgehend zylindrisch. Stirn- und flankenschneidend. Rechtslauf / Rechtsdrall
- Rechtsdrall bei guter Werkstückspannung, Gutseite unten mit optimalem Spanauswurf nach oben
- Linksdrall für kleinere, schlecht zu spannende Werkstücke, Gutseite oben, Schnittdruck und Spanauswurf nach unten
- MEC / mech. Vorschub
- Extrem lange Standzeiten

HWM Roughing Spiral Z3

- For rough cutting and cut-out work in wood board materials and solid wood
- Suitable for high cutting and feed rates
- Spiral guides, parallel cylindrical, face and flank cutting; right handed / clockwise
- Clockwise rotation in firmly clamped workpieces with finished side down for optimal upward chip removal. Counterclockwise for smaller, difficult to clamp workpieces with finished side uppermost for downward cutting force and chip removal
- MEC / mechanical feed
- Extreme long tool life

HWM-Bohrfräser Z2

- Für Durchgangs- und Spionlochbohrungen, Drückerlochbohrungen und Schlosszylinderausfräsungen
- Zwei spiralgenutete HWM-Schneiden mit 30° Bohreranschliff; Rechtslauf / Rechtsdrall
- MEC / mech. Vorschub

HWM Bore Cutter Z2

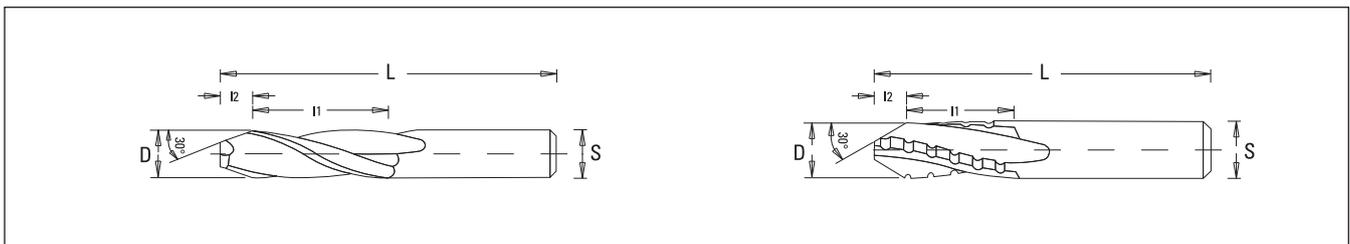

- For spy-hole, latch, cylinder-lock openings
- Two spiral HWM knives with 30° chamfer; right handed / clockwise
- MEC / mechanical feed

HW-WPL-Spezial-Schrupfräser Z10

- HW-Wendepplatten-Schrupfräser zum Schruppen und Formatieren von Weichholz, Hartholz sowie Platten mit oder ohne Beschichtung.
- 10 bzw. 14 Schneiden, die auf vier Flügel verteilt sind und große Spanräume, sorgen für guten Spanauswurf.
- HW-Wendepplatten garantieren stabilen Schneidendurchmesser.
- Für Oberfräser und CNC-Maschinen geeignet.
- MEC

HW Turnblade Rough Rebating Bit

- Disposable insert straight router cutter with multiple cutting flutes.
- Suitable for rough rebating and sizing in softwood, hardwood and man-made boards (with or without coating).
- Multiple cutting flutes ensure fine chips are produced for improved waste extraction.
- Replaceable inserts ensure a constant cutting diameter.
- For use on routers and machining centres with CNC control.
- MEC

HW-WPL-Schafffräser Z2

- HW Wendeplatten Nut- und Falzfräser mit versetzt angeordneten Messern.
- Obere und untere Aussenschniede jeweils mit Achswinkel, was eine saubere Oberfläche sowie Einbohrung ermöglicht.
- Für laminierte und furnierte Platten.
- Für stationäre Oberfräsen und CNC-Maschinen.

HW Straight Router Cutter Z3

- Disposable insert straight router cutter.
- Suitable for rebating and sizing in man-made boards (with or without coating). Replaceable inserts ensure a constant cutting diameter and finish quality.
- These cutters are not suitable for plunge cutting.
- right / left
- MEC / mechanical feed

6225 HW

6236 HW

HW-Schlosskastenfräser Z2

- Zur Herstellung von Schlosskasten- und Stulpausfräsungen bei stufenweiser Zustellung
- Stabiler Tragkörper mit zwei Spannuten und je 1 HW-Wechselmesser Form A und B, mit eingeschliffenen Spanbrecher-nuten
- Einsatzdaten:
 - Zustellung in Massivholz: 8 – 10 mm;
 - in Spanplatte: 15 mm;
 - Vorschub: 12 m/min
- Drehzahl: 12.000 – 18.000; Rechtsgang
- MEC / mech. Vorschub

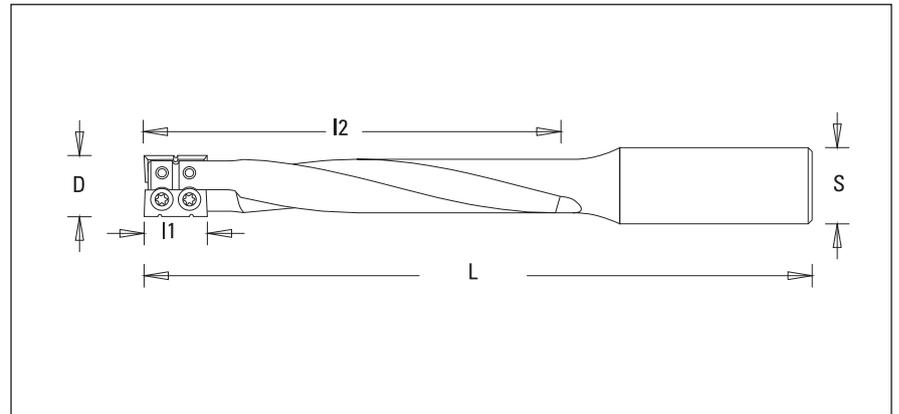

HW Lock Case Cutter Z2

- For fabrication of cuff- or lock milling grooves through gradually infeed
- Solid cutter body with two chip guides and 1 each of turnblades form A and B with ground chip breaking grooves
- Progression:
 - in solid wood: 8 – 10 mm;
 - in chipboard: 15 mm
 - Feed rate: 12 m/min;
- Rotation speed: 12000 – 18000; Right handed
- MEC / mechanical feed

4320

HW-WPL-Plan- und Falzfräser Z2 + V2

- HW-Wendepplatten Fräser mit Vorschneidern, zum Falzen und Planen.
- Für Weichholz, Hartholz und Platten geeignet.
- Für schnelle Bearbeitung von grossen Flächen.
- Die Vorschneider garantieren eine saubere Bearbeitungsfläche.
- Für Oberfräs- und CNC-Maschinen.
- MEC / mech. Vorschub

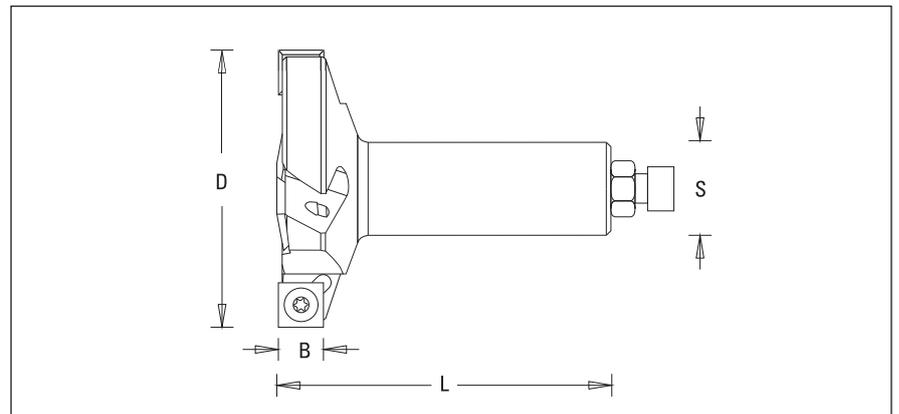

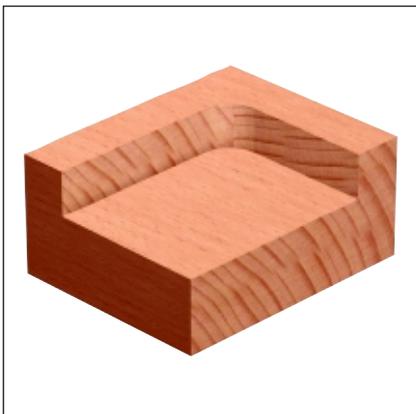

HW-Planing and Rebating Cutter Z2 + V2

- Disposable insert planing and rebating router cutter complete with cutting flutes and scorers.
- Suitable for planing and rebating in softwoods, hardwoods and manmade boards.
- A good tool for fast removal of material over a large surface area.
- Scorers will give an improved finish at the bottom of the cut.
- For use on routers and machining centres with CNC control.
- MEC / mechanical feed

HW-WPL-Verstellnutter Z4 + V4 + Z2

- Stahlkörper mit HW-Wendeplatten für sauberen Schnitt.
- Zum Nuten in Hartholz, Weichholz sowie Platten aller Art (mit oder ohne Beschichtung).
- Nutbreite wird durch Zwischenringe mit einer Genauigkeit von 0,1 mm justiert.
- HW-Wendeplatten garantieren hohe Schnittgenauigkeit sowie Schnittqualität
- Für Oberfräs- oder CNC-Maschinen geeignet.
- MEC / mech. Vorschub

HW Adjustable Grooving Cutter Z4 + V4 + Z2

- Hard wearing steel body complete with disposable tungsten carbide knives and scorers for improved finish.
- Suitable for producing various thickness grooves and slots in softwood, hardwood and man-made boards (with or without coating).
- Cutting width can be adjusted in 0.1 mm steps by using supplied spacer rings. Replaceable inserts ensure a constant cutting diameter and finish quality.
- For use on routers and machining centres with CNC control.
- MEC / mechanical feed

4098 HW

**HW-Wpl-Schwenkmesserkopf
Z2 mit Schaft**

- Zum Anfräsen von Fasewinkeln und Abplattungen bis 90° an Holz- und Plattenwerkstoffen
- Diese Konstruktion verfügt über eine Einstellhilfe, um die Schwenkelemente durch eine innenliegende Rasterung um jeweils 7,5° in Stufen zu verstellen, dadurch sind gängige Fasewinkel wie 7,5°; 15°; 22,5°; 30° oder 45° schnell einstellbar
- Tragkörper aus Stahl. Rechtsgang
- MEC / mech. Vorschub
- Schwenkbar – 45° nach oben und bis 90° nach unten

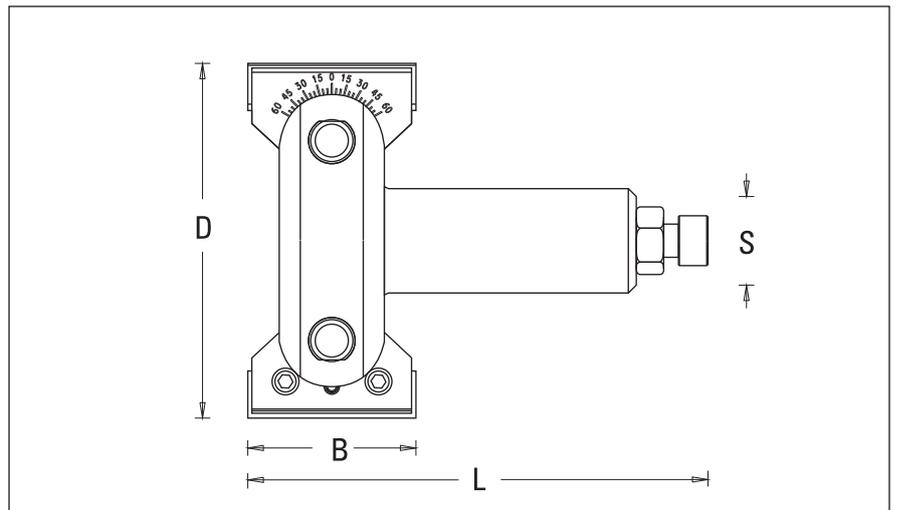

**HW Adjustable Bevel Router
Cutter Z2 with Shank**

- For production of bevels and panel raising to 90° in solid hardwood and board materials
- The construction has an adjustment scale allowing the swivel arm to lock into notches in 7.5° increments – thus allowing common angles such as 7.5°, 15°, 22.5°, 30° and 45° to be quickly set
- Body in steel. Right handed
- MEC / mechanical feed
- Adjustable up to 45° upward and up to 90° downward

HW Rounding and Chamfering Router Cutter Set

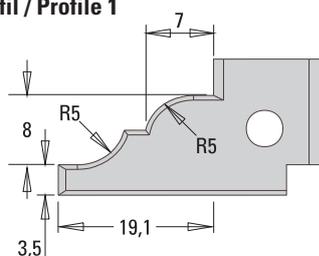

- Disposable insert router cutter suitable for rounding over and/or chamfering various thicknesses of softwood, hardwood or man-made boards.
- continuous adjustment, scale accuracy of 0.5 mm.
- Can be adjusted for working in a left and right rotation direction.
- For use on routers and machining centres with CNC control.
- MEC / mechanical feed

Profil / Profile 2

Profil / Profile 3

Profil / Profile 4

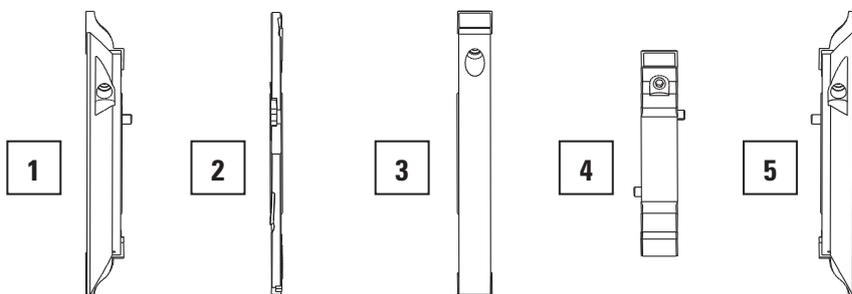

HW-WPL Konterprofil-Fräasersatz Z2

- Zum Fräsen von Profil und Konterprofil an Möbeltüren, Kassetten, in Hart- und Weichholz
- Ein Tragkörper aus Stahl – für vier verschiedene Profile
- Set 1 besteht aus Fräsern 1/2/3/4 zur Erstellung der Holzmuster 1+2
- Set 2 besteht aus Fräser 1/2/3/4/5 zur Erstellung der Holzmuster 1+2+3
- Falls keine Angaben zum Profil erfolgen, liefern wir Profil Nr. 3
- MEC / mech. Vorschub

HW Counter Profile Cutter Set Z2

- For milling of profiles and counter profiles at doors, coffering, in softwood and hardwood
- Cutter body made of steel – for four different profiles
- Set 1 consists of cutter 1/2/3/4 for making the wood pattern 1+2
- Set 1 consists of cutter 1/2/3/4/5 for making the wood pattern 1+2+3
- We do deliver profile no. 3 if no datas concerning the profile type were given
- MEC / mechanical feed

HW-WPL Multiprofilfräser Z2

- Zum Fräsen von Kanten-, Kassetten-, Kranzprofilen usw. in Massivholz und Plattenwerkstoffen auf CNC- und stationären Oberfräsen.
- Geeignet für Maschinen mit mechanischem Vorschub.
- Grundkörper aus Stahl für einseitig profilierbare HW-Wechselmesser mit Stützplatten.
- Auch für stirnseitigen Anschlag ausgelegt.
- Wechselmesser und Stützplatten sind gesondert zu bestellen
- MEC / mech. Vorschub

HW Multi profile cutter Z2

- For cutting solid wood with special shapes, coffered wood ceilings and border profiles etc, in solid wood and wooden boards on CNC and stationary router machines.
- For machines with mechanical feed.
- Tool body in steel, for one sided custom profiled TC interchangeable knives on support plate, also for diving cuts.
- Interchangeable knives and support plates must be ordered additionally.
- MEC / mechanical feed

CNC-Bohrfutter

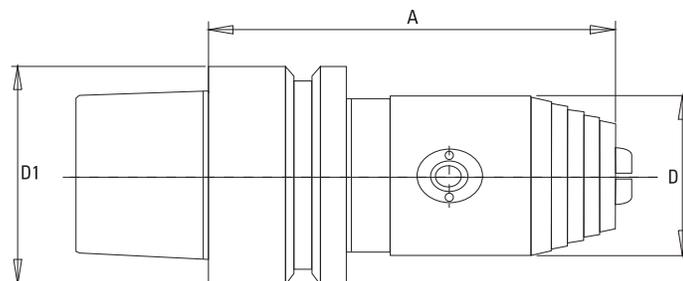

- CNC-Universalbohrfutter, gehärtet und geschliffen.
- Stufenlos verstellbarer Spannbereich
- Die Bohrfutter werden unter Berücksichtigung der Maximaldrehzahl ausgewuchtet.
- Drehrichtungsunabhängige Spannsicherheit, kurze Spann- und Umrüstzeiten
- Sehr kurze Baumasse und hohe Drehzahlen sind weitere wichtige Merkmale

CNC-drill chuck

- CNC universal drill chuck, hardened and grinded
- continuously adjustable clamping range
- the drill chuck is balanced under consideration of the max. speed
- direction independent chuck reliability, short chuck- and retool times
- very short construction dimensions and high rotations speed are further important criteria

Hydro-Dehnspannfutter

Hochgenaue Dehnspannfutter zum Spannen von Schaftwerkzeugen mit grosser Rundlaufgenauigkeit. Der Einsatz von Dehnspannfuttern führt zur Verbesserung der Schnittqualität und zur Verlängerung der Werkzeugstandzeit. Die Verwendung erfolgt drehrichtungsunabhängig für Rechts- und Linkslauf. Durch die sehr hohe Spannkraft können hohe Drehmomente, 250Nm bei 25 mm Schäften, übertragen werden. Hydro-Dehnspannfutter sind hochgeschwindigkeitstauglich und erzeugen beim Betrieb keine Fliehkräfte durch Spannsegmente, da kein Einsatz von Spannzangen erforderlich ist.

Für SK30 und SK40 muss der entsprechende Anzugsbolzen zusätzlich bestellt werden.

Vorteile der Dehnspanntechnik:

- schneller Werkzeugwechsel durch Lösen und Anziehen der Spannschraube
- sehr präzise Werkzeugeinspannung mit max. 3 µm Rundlauffehler
- sehr hohe Spannkraft, hohe Drehmomente können übertragen werden
- hochgeschwindigkeitstauglich
- durch den genauen Rundlauf ergibt sich eine hohe Oberflächengüte am Werkstück und eine höhere Werkzeugstandzeit
- höchste Wiederholgenauigkeit durch zentrisches Spannen von Zylinderschäften
- Der Spanndurchmesser, 20 oder 25 mm Durchmesser, ist für eine h8-Toleranz des Werkzeugschaftes ausgelegt.
- Die Verwendung von Zylinderschäften DIN 1835 Form A und DIN 6535 Form HA ist vorgeesehen.

Hydro-tension collet chuck

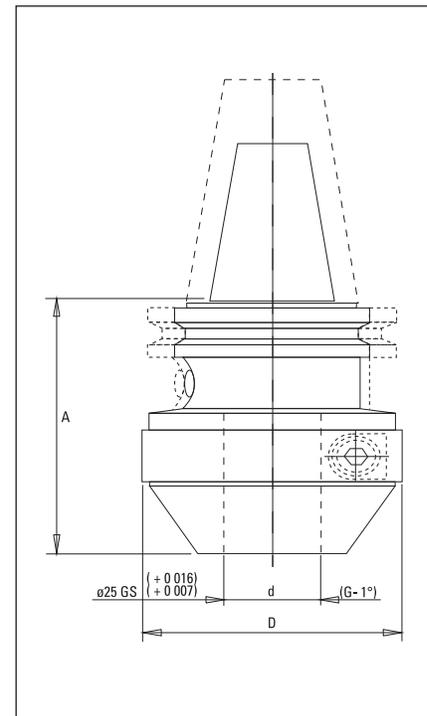

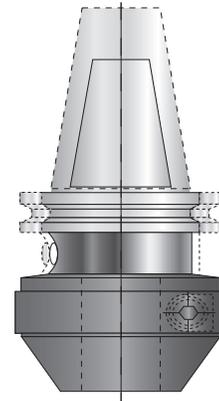

High precision hydro tension collet chuck for clamping of shank tool with great true running accuracy. The application of tension collet chucks leads to a improvement of the cutting quality and to a enlargement of the tool life travel. The use takes place independently of the rotation for right or left hand motion. High torques, 250Nm at 25 mm chucks, can be transmitted though the high resilience. Hydro tension collet chucks are high speed fit and create no centrifugal power through clamping segments, because there is no application of collet chucks required.

For SK30 and SK40 the accordant retension knob has to be ordered additionally.

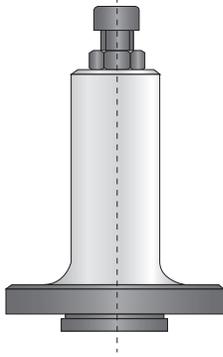

Advantages of the tension collet technic

- faster tool removal through dismanteling and tightening of the clamping screw
- very precise tool clamping with max. 3 um rotation failures
- very high tension force, high torque can be transmitted
- high-speed capable
- through the exact true running a high surface quality and a better tool life travel is given
- highest repeat accuracy through central clamping of parallel shank
- the clamping diam., 20 od 25mm, is designed for a h8-tolerance of the tool shank
- the application of paralles shank is provided for DIN 1835 Form A and DIN 6535 Form HA

6378

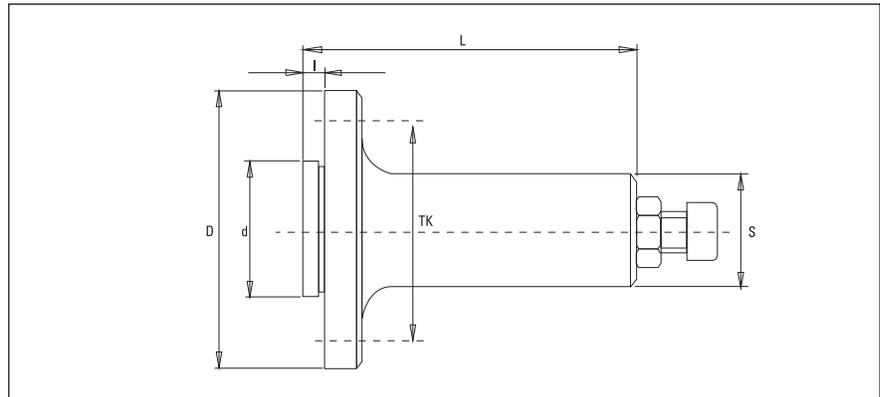

Fräsdorn Schaft 25 mm

- Zur Aufnahme von Sägeblättern und Nutfräsern mit 22 und 30 mm Bohrung.
- Für Rechts- und Linksgang verwendbar.

Arbor Shank 25

- For mounting of saws and grooving tools with 22 or 30 mm bore
- For right and left handed operation

Fräsdorn SK30/SK40

- Mit zweiteiliger Fräseranzugsschraube; ohne Zwischenringe.
- Zur Aufnahme von ein- oder mehrteiligen Bohrungswerkzeugen mit 30 mm Bohrung.
- Für Rechts- und Linksgang verwendbar.

Arbor SK30/SK40

- With two piece cutter mounting screw; without spacer rings
- For mounting of one- or multi-part tools with 20 or 30 mm bore
- For right and left handed operation

Montagevorrichtung

- Praktische, um 90° schwenkbare HSK-Montagevorrichtung.
- Manuelles, werkzeugloses Einspannen bzw. Lösen der Spannfutter durch leicht bedienbaren Drehgriff.
- Schwenksockel mit Befestigungsbohrungen für die Tischmontage.
- Die Montagevorrichtung ermöglicht das werkzeuglose Einspannen und Lösen von HSK-Spannfuttern.
- Die Vorrichtung eignet sich zur Aufnahme aller HSK-Ausführungen von Form A mit Greiferrille bis Form F mit vergrößertem Bund.

Mounting device

- practical, 90° rotatable HSK mounting device
- manual, tool less clamping respectively dismantling of the collet chuck through easily operated turning handle
- rotatable base with fixing hole for the tabel mounting
- the mounting fixture enables the tool less clamping and dismantling of HSK collet chucks
- the device is qualified for the admission of all HSK designs of Form A with claw flute till Form F with heightened coil.
